

Connected Parking LED Signs

Orange Traffic

Dimonoff and Orange Traffic are joining forces to create a solution to optimize the use of parking spaces, especially in the streets. This solution allows snow removal operations to be more efficient and to maximize fluidity on the roads during special events.

Description

By combining Orange Traffic's LED signs and the Dimonoff SCMS platform, this solution allows you to:

- Deliver a clear message about a lasting unit;
- Access a long-range mesh network accessible through wireless gateways;
- Manage urban assets with a powerful and user-friendly platform.

See the one-pager for more information about How it Works and an illustration of the solution under the Documents section.

Specifications

- Indicators of rugged polycarbonate and aluminum assembly ready for pole mounting installation.
- Durable Orange Traffic LED panel light meeting the highest industry standards.
- Long pot mesh network on a 2.4 GHz radio signal (900 MHz optional).
- Easily configurable cellular gateway thanks to its installation application (optional Ethernet connection).
- All-in-one Dimonoff SCMS urban asset management platform designed to remotely access, monitor and control a wide variety of sensors and connected devices.
